

Dropbox Protect

Govern cloud file sharing without slowing work down

The challenge IT and security teams face

Organizations are producing more content than ever, and moving it faster across cloud storage platforms, partners, and customers. AI is also changing how quickly content is created, shared, and reused. As content explodes, access expands just as quickly.

Shared links outlive projects. Collaborators come and go. Permissions quietly pile up. What starts as productive collaboration becomes risk that is hard to see and even harder to control.

Dropbox Protect helps IT and security teams reduce risky sharing, strengthen access controls, and maintain least-privilege governance across cloud content, without slowing collaboration down.

Built for governing content access at scale

[Dropbox Protect](#) is a data access governance solution that helps IT and security teams secure sensitive company data across Dropbox, Google Drive, and Microsoft 365. It gives admins a unified view of who has access to what, plus the ability to quickly remediate risky sharing and enforce appropriate access over time. With Protect and Control, you can:

			
See every file, folder, and shared drive—and who has access	Remove public links, external access, or stale permissions	Enforce least-privilege access continuously	Stay audit-ready with built-in reporting and change history

How it fits with your existing tools

Most organizations already use DLP and native admin controls. Dropbox Protect fills the gap these tools leave between identifying risk and fixing access.

Existing tools help you...

Detect sensitive content

Review access periodically

Respond after exposure

Remediate one file at a time

→ **Dropbox Protect helps you...**

Govern who can access it

Enforce least-privilege access continuously

Identify and correct oversharing before incidents

Remediate access across thousands of files at once

The outcomes that matter most

Understand where risk exists across cloud content

Get unified visibility across Dropbox, Google Drive, and Microsoft 365. Easily understand how files are shared internally, externally, or publicly-and spot risk fast.

Reduce exposure without disrupting collaboration

Bulk update permissions across files and folders in just a few clicks. Remove public links, revoke external access, or transfer ownership without disrupting work.

Replace manual cleanups with continuous governance

Leverage access governance policies that automatically flag or fix risky access patterns. Replace quarterly audits with always-on governance that stays current.

Be audit-ready without fire drills

Maintain a clear record of access changes and enforcement actions. Generate reports for audits, access reviews, and compliance checks, without scrambling for evidence.

Common ways customers use Dropbox Protect

- Remove public and company-wide links across cloud storage
- Manage vendor and partner access safely
- Clean up access for former employees and contractors
- Enforce least-privilege policies across multiple cloud content storage platforms
- Prepare for audits without manual reviews
- Limit exposure before connecting content to AI services

The impact customers see

- 💡 Greater visibility into overshared and publicly accessible content
- 💡 Faster permission cleanup and access reviews
- 💡 Less manual work for IT and security teams
- 💡 Stronger, more defensible access governance

SurveyMonkey

"We had almost no visibility into what was being shared before... **We went from zero visibility to 100.**"

hackerone

"It was **game-changing** to easily transfer ownership, **saving us time and effort**, which isn't feasible in any other way."

Ad Hoc

"**It's been the single greatest time saver we've ever had.** I've gotten more done in two months than I would've gotten out of hiring an entire person for a year."

essencemediacom

"Being able to **change the link type** on almost a million documents in a number of hours was **ridiculously smooth.**"

Proof points are from Nira, which is now Dropbox Protect.

Why Dropbox Protect

Work today happens across clouds, teams, and tools. **Dropbox Protect** helps IT and security teams protect company data while keeping collaboration simple for everyone else.
