

# Powering identity and mobility management to enable secure collaboration

VMware Workspace ONE, powered by VMware AirWatch technology, provides frictionless and secure access to Dropbox. Workspace ONE enables instant mobile productivity with a seamless out-of-the box experience, providing enterprise-ready apps with minimal setup required.

“Workspace ONE empowers employees to be productive anywhere by simplifying the process of securing and distributing apps and data to devices. Our partnership with Dropbox gives customers enhanced mobile security without sacrificing the simplicity and ease of use that’s core to the Dropbox experience.”

**Noah Wasmer**  
General Manager and Senior VP,  
Mobile Products - VMware

- **Empower employees with instant access to apps.** Improve employee productivity by providing them with access to a personalized app catalogue, where they can access Dropbox Enterprise and other enterprise apps.
- **Simplify adoption with secure, one-touch login.** With the built-in VMware Identity Manager, eliminate the need for containers or SDKs with “one-tap access” to a Dropbox account. Plus, you can remove the hurdle of complicated configurations with auto-configured apps.
- **Keep data secure.** Take advantage of Workspace ONE integrated security features like app tunneling, encryption, data loss prevention, and other device restrictions to secure your corporate data. You can support all users, whether they are using a managed or unmanaged device.
- **Save time and money.** Not only can you reduce IT support costs, but you can leverage your existing investments in EMM, VPN, and identity solutions.
