# Seamlessly bring your content and projects together

Dropbox integrates with JIRA so your team can access and share content directly from within your issue and project management tool. With the Dropbox for JIRA add-on, everyone can see what's being worked on and get the most up-to-date material in real time, eliminating unnecessary review cycles and keeping your projects organized in one place.

### Organize content like a pro with embedded folders

With a single click, you can link a Dropbox folder to a JIRA project and gain rich access to content—files, video, images, and more—from within JIRA. You can easily navigate entire Dropbox folder structures and natively preview documents directly in JIRA.

### Manage your files

Team members can read, upload, delete, rename, and create folders in Dropbox without leaving the JIRA environment

### Pair a file with an issue

When you link a Dropbox file to your JIRA issue, you can view inline previews, full size previews and comments of your Dropbox files from within JIRA

### Authenticate with Dropbox from JIRA

Once you install the Dropbox for JIRA add-on, connect to your Dropbox account through OAuth for a seamless user experience

"Atlassian has a deep history with Dropbox, first integrating with HipChat, and more recently, our JIRA project management platform. In doing so, we're thrilled to extend the capabilities of Dropbox with the scale of the Atlassian Marketplace, and bring our customers even greater value."

Max Mancini Head of Ecosystem, Atlassian

😻 Dropbox

Dropbox keeps more than 500 million users on the same page with easy-to-use collaboration tools and the most reliable file syncing and sharing platform

- Create seamless workflows with previews across devices to enable team collaboration
- · Collaborate on any file type
- Simplify external collaboration and secure external sharing with shared links
- Bring people and ideas together with Dropbox Paper, a flexible workspace

## 💠 Jira Software

JIRA Software is the leading software development tool used by agile teams to manage and track projects

- Create user stories and issues, plan sprints, and distribute tasks across your software team
- Prioritize and discuss your team's work in full context with complete visibility
- Ship with confidence and sanity knowing the information you have is always current
- Improve team performance based on real-time, visual data you can use
