

## Securely share, preview and edit your Dropbox files in Workplace

---

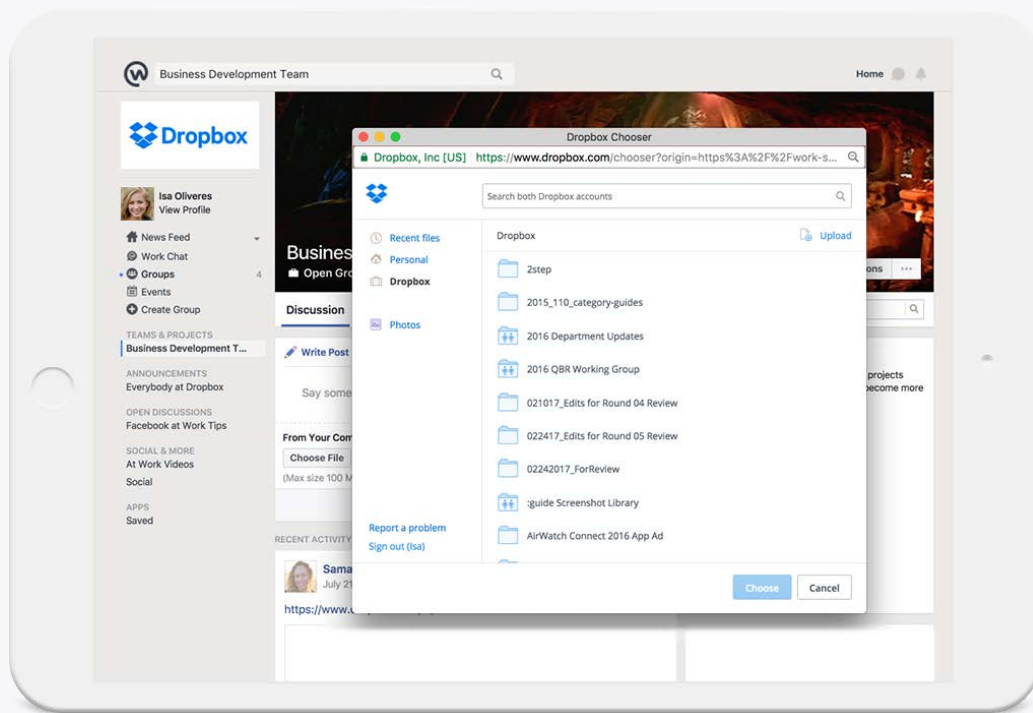

Workplace by Facebook enables you to connect your entire organization with familiar communication and collaboration tools that help turn ideas into action. Through the Workplace integration with Dropbox, you can seamlessly access, edit and share documents on a phone or computer without leaving Workplace. Plus, anytime you share a Dropbox link, a preview of the file is automatically generated without compromising viewing permissions, ensuring your files are safely protected.

- ✔ Upload, download, preview, edit and share Dropbox files directly from Workplace and Workchat
- ✔ Share large files in Workplace with a Dropbox link and avoid version control issues since links will automatically update to the latest version of the file
- ✔ Manage viewer permissions of files in Workplace on Dropbox
- ✔ Store all Workplace project documents in a centralized storage location
- ✔ When integration is turned on, Workplace acts as discovery layer for Dropbox content that users share

“The way we work is quickly evolving. With the integration of Dropbox and Workplace, you can get more done and work better, regardless of whether you’re at your desk or on-the-go. Sharing files from Dropbox in Workplace Groups and Workchat is a faster, more structured, open, and secure way to collaborate with teammates, and provides a single, centralized location for your files.”

**Luke Walsh**  
Product Manager of Workplace Platform

Clicking on the “Dropbox” button prompts the Dropbox file-chooser window to pop up. If the user is already logged in to Dropbox, it will automatically show their files. If not, the user will have to log in to Dropbox.

## Dropbox Business

Dropbox is simplifying the way people work together, helping them do more with the tools they already know and love.

- Easy access to and editing of any kind of file from the cloud on mobile and desktop
- File sharing with both internal and external contributors to increase collaboration efficiency
- Automatic saving of changes to your files in Dropbox

## Workplace

Workplace is an enterprise communication and collaboration platform built on Facebook’s powerful systems that keep more than a billion people’s information safe.

- Share files and comments with the right people with Workplace Groups
- Keep your data secure with enterprise security features such as single sign-on, two-factor authentication and third-party security certifications
- Go live, any time with Live Video so you can broadcast to your whole business from the camera in your pocket
- Message coworkers instantly with messaging, voice and video calling
- Collaborate with people from any other business that uses Workplace through multi-company groups
- Automate everyday tasks with bots in groups and Work Chat
